

Air Cleaners

Air cleaners are great for removing airborne particles such as dust, dirt, pollen, mold spores, and pet dander. Having an air cleaner installed allows for bigger filters to be used, which are superior to the standard 1" filters that come with your heating and cooling system. These larger filters have more than 9 times the filtration area found in 1" filters. In order for this, an air cleaner must be installed on your Heating and cooling system.—We'll do that for you!

CLEAN COMFORT
INDOOR AIR ESSENTIALS

MERV 11

Pollen	✓
Dust/ Lint	✓
Dust Mites	✓
Debris	✓
