

# UV Lights

## THE POWER OF A UV LIGHT

UV Lights are your best line of defense against bacteria, viruses, and mold, which can grow on the surface of your HVAC coil. Untreated systems can build up contaminants and other harmful pollutants, which can be released into the air you breathe. UV lights help maintain a clean and safe environment. They also reduce airborne particles such as dust, dander, pollen, and mold spores.

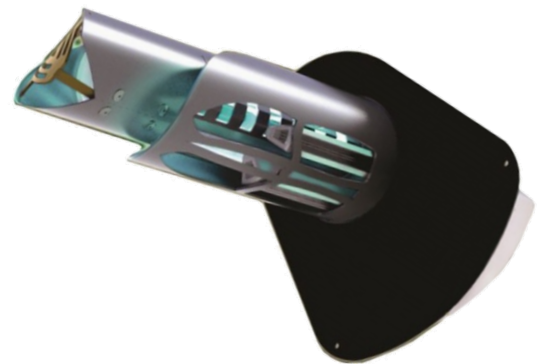

**CLEAN COMFORT**  
INDOOR AIR ESSENTIALS

- Installation is quick & easy
- Helps A/C run more energy efficiently & can increase the life of your central AC unit
